PROFILE

Computer Science undergraduate (CGPA: 9.13) specializing in AI systems, full-stack development, and scalable data pipelines. Experienced in building real-world applications with focus on performance, automation, and clean architecture. Seeking software engineering internship opportunities.

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science & Engineering

Bennett University, Greater Noida | Aug 2023 – Present

CGPA: 9.13 / 10 (SGPA: Sem 1 – 9.18, Sem 2 – 9.28, Sem 3 – 9.13, Sem 4 – 8.96)

Senior Secondary Education (CBSE)

Class XII: 87% | Class X: 92%

ACHIEVEMENTS

- CGPA: 9.13 (Consistent top performer)
- Built 7+ real-world projects across AI, web, and mobile
- Developed an end-to-end AI pipeline for automated data analysis

ACADEMIC & TECHNICAL PROJECTS

AI Insight Pipeline — Automated Data Intelligence System

Technologies: Python, Pandas, PyTorch, NLP, Statistical Analysis

Architected an end-to-end pipeline to convert raw datasets into structured insights, including automated profiling, cleaning, validation, feature engineering, statistical analysis, and sentiment detection, with report generation in PDF, DOCX, and Markdown formats.

Clinic Management System

Technologies: React, JavaScript, Node.js, SQLite, SQL, JWT, HTTPS, CSS

Engineered a full-stack clinic management system with role-based access for admins, doctors, and staff, incorporating secure JWT authentication, protected APIs, and optimized SQL schemas for handling patient records and transactions.

Deep Adaptive Image Anonymizer (DAIA)

Technologies: Python, PyTorch, OpenCV, EfficientNet, ONNX

Developed an AI-powered system to detect and anonymize sensitive regions such as faces, text blocks, ID fields, and license plates using adaptive filtering and optimized CNN-based inference.

Laundry Management Application

Technologies: Flutter, Dart, Firebase Authentication, Firestore

Implemented a mobile application for campus laundry management with role-based access, real-time order tracking using Firestore, and a scalable modular architecture.

Developer Portfolio Website

Technologies: Next.js, React, Tailwind CSS

Created a responsive portfolio website showcasing projects with modern UI components, smooth animations, and optimized performance.

Shared Diary Application

Technologies: React, Firebase, TypeScript, Tailwind CSS

Built a secure diary-sharing platform with authentication and approval-based access control, enabling users to share personal content safely.

GO UP — 2D Platformer Game

Technologies: Python, Pygame

Designed a 2D platformer game with physics-based movement, collision detection, scoring systems, and complete game logic implementation.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, Dart, C++, SQL

Web & App Development: React.js, Next.js, Flutter, Tailwind CSS

Backend & Databases: Node.js, Firebase, Firestore, SQLite, MySQL, Flask (basic)

AI / ML: PyTorch, HuggingFace, NLP, Machine Learning fundamentals

Tools & Platforms: Git, GitHub, Figma, Canva

ACADEMIC INTERESTS

- Artificial Intelligence and Intelligent Systems
- Data Analytics and Automation
- Software Engineering and System Design
- Human-Centric Application Development

STRENGTHS

- Analytical and structured problem-solving
- Consistent self-learner with project-driven growth
- Clear documentation and debugging practices
- Strong balance between UI design and backend logic
